City Life

Creating the world we want to live in

Introduction

In 2007, for the first time, the majority of human beings will live in cities. From the infrastructure of energy, water and transport to the buildings themselves, only engineering makes modern city life possible. We shape our environment around human needs and desires, so how should our cities continue to change? Or does trying to predict human aspirations only limit our visions of the future? Join the debate here.
